## LiteScout® – the light-up magnetic board

An optical aid for the development of the blind, partially sighted, and people with multiple handicaps

In therapy, optical stimuli are used to encourage the blind, the partially sighted, and those with multiple handicaps to engage in activities. Game-like visual exercises using a light source constitute an important part of vision training. The goals of such training include fostering mental development and improving hand-eye coordination. The better the quality of the light source and game materials used, the greater the patient's interest and motivation to give the exercises their full attention and concentration.

The LiteScout® is ideally suited for daily vision training of patients of all ages. The light-up magnetic board has all of the hallmarks of a quality product, and its enormous therapeutic and diagnostic benefit is greatly appreciated by specialists in special education, rehabilitation, ergotherapy, ophthalmology, and optics. And yet the LiteScout® is so easy to operate that every exercise can be done at home, too (e.g., parents can work with their child at home).

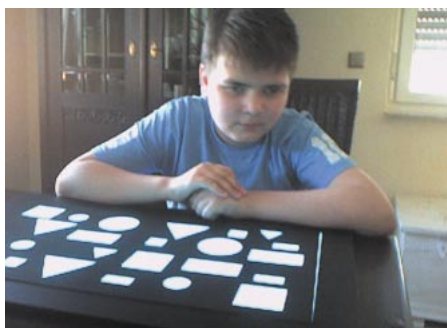

## LiteScout® applications

The LiteScout® can be used in a wide variety of environments. For example, the unit could be used for everything from early development of the blind, the partially sighted, and children with multiple handicaps to therapy for patients with physical and mental handicaps and rehabilitation therapy for stroke patients and accident victims.

## Two models – both are designed around the needs of patients

We offer two models that differ only in size and price. All other characteristics are identical.

	LiteScout®-Pro	LiteScout®-Basic
Format	638 x 405 mm	387 x 300 mm

Light Area	538 x 305 mm	210 x 297 mm (A4)
Light Color	bluish white	bluish white
Weight	2.000 g	1.000 g
Accessories	Transportation Bag Reduction of Screen Window	Transportation Bag

**“Where is my light?”**  
*Immediately after moving into a new apartment, the first thing Eddi Haug from Brandenburg (13 years old, deaf and blind) asked about was his beloved toy – a LiteScout®!*

### Selected LiteScout® characteristics

Homogenous and magnetic light area, strong contrasts- and sharp contours, non-dazzling and flicker-free light, infinitely adjustable levels of brightness, sturdy and portabel (flat and light), TÜV/GS certified power supply for operating the LiteScout®.
